U.S. Patent and Trademark Office PTOL-326 (Rev. 7-05)

Application/Control Number: 09/667,525

Art Unit: 2611

DETAILED ACTION

1. This office action is in response to the amendment filed on 02/06/06.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 37-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hinoshita et al. (US 3,959,726) (hereafter Ninoshita) in view of Resch (US 4,564,858) and Snijder et al. (US 4,003,002) (hereafter Snijder).

Hinoshita discloses a transmission system including "a mapper operable to map a data stream including audio and video information to an n-level digital mapped signal (Fig. 4, col. 4, lines 12-26), "a filter having a VSB characteristic which covers a frequency band including a carrier frequency" "to produce a VSB modulated signal" (Fig. 4, elements 30, 32, 34; Fig. 5D, col. 4, lines 13-39), "said receiving apparatus ... video information" (Fig. 2, elements 36-48).

Hinoshita differs from the claimed invention in that it does not disclose that the filter is "digital filter" and that the filter includes "roll-off characteristic".

Resch, in the same field of endeavor, disclose transmission of VSB modulated signal, where the VSB filter in the transmitter also has "roll-off" characteristic to simplify the circuit on the receiving side (col. 4, line 55 to col. 5, line 21).

Application/Control Number: 09/667,525

Art Unit: 2611

The use of "digital filter" has been known in the art (see Snijder, Fig 1, element 3).

Therefore, it would have been obvious to one skilled in the art, at the time of the invention, to, firstly, incorporate the "roll-off characteristic" of Resch into Hinoshita to reduce the complexity of the system and secondly, implement a "digital filter" (i.e. as preference) since digital filter would provide certain advantages over the analog filter with certain trade off.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nitadori (US 4,053,713) disclose Multi-Channel, Multiplex Data Transmission System.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dac V. Ha whose telephone number is 571-272-3040. The examiner can normally be reached on 5/4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on 571-272-3086. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
